GIANCOLI LESSON 1-7 TO 1-8
ORDER OF MAGNITUDE: RAPID
ESTIMATING
DIMENSIONS AND DIMENSIONAL
ANALYSIS

Introductory Video

Powers of 10 – Scales of the Universe

Objectives

- Quickly estimate the answer to a complicated problem to within a factor of 10.
- Use dimensional analysis to convert units and to check solutions.
- Find important facts in your textbook.

Order of Magnitude

- Order of magnitude often refers to a number's power of 10
- Avagadro's number is 6.02×10^{23} , it's order of magnitude would be 10^{23}

Order of Magnitude Estimating

- Round all numbers to one significant digit before performing operations.
- Find an order of magnitude estimate for

$$8.376 \times 10^{-9} \div 1.6472 \times 10^5$$

Order of Magnitude Estimating

- Rounding all numbers to one significant digit before performing operations.
- Find an order of magnitude estimate for

$$8.376 \times 10^{-9} \div 1.6472 \times 10^5$$

$$8 \times 10^{-9} \div 2 \times 10^5$$

Order of Magnitude Estimating

- Rounding all numbers to one significant digit before performing operations.
- Find an order of magnitude estimate for

$$8.376 \times 10^{-9} \div 1.6472 \times 10^5$$

$$8 \times 10^{-9} \div 2 \times 10^5$$

$$(8 \div 2) \times 10^{-9-5} = 4 \times 10^{-14} \approx 10^{-14}$$

Order of Magnitude Estimating

- Rounding all numbers to one significant digit before performing operations.
- Find an order of magnitude estimate for

$$8.376 \times 10^{-9} \div 1.6472 \times 10^5$$

$$8 \times 10^{-9} \div 2 \times 10^5$$

$$(8 \div 2) \times 10^{-9-5} = 4 \times 10^{-14}$$

$$*Actual* = 5.499 \times 10^{-14}$$

Dimensional Analysis

- Two main uses
 - Converting units
 - Meters to feet
 - m/s to mi/hr
 - Cancelling units in an equation
 - Drive 60 mi/hr for 3 hours
 - $60 \text{ mi/hr} \times 3 \text{ hr}/1 = 180 \text{ mi}$

Dimensional Analysis

- Simplify

$$\frac{6}{15}$$

Dimensional Analysis

- Simplify

$$\frac{6}{15} = \frac{3 * 2}{3 * 5} = \frac{3}{3} * \frac{2}{5} = 1 * \frac{2}{5} = \frac{2}{5}$$

or

$$\frac{6}{15} = \frac{\cancel{3} * 2}{\cancel{3} * 5} = \frac{2}{5}$$

Dimensional Analysis

- Simplify

$$\frac{7xy^3}{28a^4b^2} \cdot x \frac{4a^2b^3}{3x^3y^4}$$

Dimensional Analysis

- Simplify

$$\frac{7xy^3}{28a^4b^2} \cdot \frac{4a^2b^3}{3x^3y^4}$$

$$\frac{\cancel{7} * \cancel{x} * \cancel{y} * \cancel{y} * \cancel{y}}{\cancel{7} * \cancel{2} * \cancel{2} * a * a * a * a * \cancel{b} * \cancel{b}}$$

$$\frac{\cancel{2} * \cancel{2} * \cancel{a} * \cancel{a} * \cancel{b} * \cancel{b} * \cancel{b}}{3 * \cancel{x} * \cancel{x} * \cancel{x} * \cancel{y} * \cancel{y} * \cancel{y} * y}$$

$$\frac{\cancel{7} * \cancel{2} * \cancel{2} * a * a * a * a * \cancel{b} * \cancel{b} * \cancel{x} * \cancel{y} * \cancel{y} * \cancel{y}}{3 * \cancel{x} * \cancel{x} * \cancel{x} * \cancel{y} * \cancel{y} * \cancel{y} * y}$$

b

$$\frac{b}{3a^2x^2y}$$

Dimensional Analysis

- Conversion factors – *inside front cover, pg. 2*

$$3 \text{ ft} = 1 \text{ yd}$$

$$1 \text{ m} = 3.281 \text{ ft}$$

$$1.01325 \times 10^5 \text{ N/m}^2 = 14.7 \text{ lb/in}^2$$

Dimensional Analysis

- Conversion factors – *inside front cover, pg. 2*

$$3 \text{ ft} = 1 \text{ yd}$$

$$1 \text{ m} = 3.281 \text{ ft}$$

$$1.01325 \times 10^5 \text{ N/m}^2 = 14.7 \text{ lb/in}^2$$

$$\frac{3 \text{ ft}}{1 \text{ yd}} = \frac{1 \text{ yd}}{3 \text{ ft}} = 1$$

$$\frac{1 \text{ m}}{3.281 \text{ ft}} = \frac{3.281 \text{ ft}}{1 \text{ m}} = 1$$

$$\frac{1.01325 \times 10^5 \text{ N/m}^2}{14.7 \text{ lb/in}^2} = \frac{14.7 \text{ lb/in}^2}{1.01325 \times 10^5 \text{ N/m}^2} = 1$$

Dimensional Analysis

- Identity Property of Equality says we can multiply any value by 1 and get the same value
 - $117 \text{ ft} \times 1\text{yd}/3\text{ft} = 39\text{yds}$
 - $17\text{yds} \times 3\text{ft}/1\text{yd} =$

$$\frac{3 \text{ ft}}{1 \text{ yd}} = \frac{1 \text{ yd}}{3 \text{ f}} = 1$$

$$\frac{1 \text{ m}}{3.281 \text{ ft}} = \frac{3.281 \text{ ft}}{1 \text{ m}} = 1$$

$$\frac{1.01325 \times 10^5 \text{ N/m}^2}{14.7 \text{ lb/in}^2} = \frac{14.7 \text{ lb/in}^2}{1.01325 \times 10^5 \text{ N/m}^2} = 1$$

Dimensional Analysis

- *If you travel 25mm in one second (25 mm/s), how many centimeters do you travel in one minute (cm/min)?*

Dimensional Analysis

- *If you travel 25mm in one second (25 mm/s), how many centimeters do you travel in one minute (cm/min)?*

$$\frac{\cancel{25\text{mm}}}{\cancel{1\text{s}}} \times \frac{1\text{cm}}{\cancel{10\text{mm}}} \times \frac{\cancel{60\text{s}}}{1\text{min}} = \frac{150\text{cm}}{1\text{min}} = 150\text{cm}/\text{min}$$

Dimensional Analysis

- *If you travel 25mm in one second (25 mm/s), how many centimeters do you travel in one minute (cm/min)?*

$$\frac{25\text{mm}}{1\text{s}} \times \frac{1\text{cm}}{10\text{mm}} \times \frac{60\text{s}}{1\text{min}} = \frac{150\text{cm}}{1\text{min}} = 150\text{cm}/\text{min}$$

- *What if you wanted to know how many minutes it took to travel 1 cm?*

Dimensional Analysis

- If you travel 25mm in one second (25 mm/s), how many centimeters do you travel in one minute (cm/min)?*

$$\frac{25\text{mm}}{1\text{s}} \times \frac{1\text{cm}}{10\text{mm}} \times \frac{60\text{s}}{1\text{min}} = \frac{150\text{cm}}{1\text{min}} = 150\text{cm}/\text{min}$$

- What if you wanted to know how many minutes it took to travel 1 cm?*

$$\frac{150\text{cm}}{1\text{min}} = \frac{1\text{min}}{150\text{cm}} = \frac{1}{150}\text{min}/\text{cm} = 6.67 \times 10^{-3}\text{min}/\text{cm}$$

or

$$(150\text{cm}/\text{min})^{-1} = 6.67 \times 10^{-3}\text{min}/\text{cm}$$

Dimensional Analysis

- Solving problems
- *Atmospheric pressure is 14.7 psi (lb/in²). How much force in lbs is exerted on a 3 sq yd area?*

Dimensional Analysis

- Solving problems
- *Atmospheric pressure is 14.7 psi (lb/in²). How much force in lbs is exerted on a 3 sq yd area?*

$$1 \text{ yd} = 36 \text{ in}$$

$$1 \text{ yd}^2 = 36^2 \text{ in}^2 = 1296 \text{ in}^2$$

$$\frac{14.7 \text{ lbs}}{\text{in}^2} \times \frac{1296 \text{ in}^2}{1 \text{ yd}^2} \times \frac{3 \text{ yd}^2}{1} = 5.72 \times 10^4 \text{ lbs}$$

INFORMATION IN THE TEXTBOOK

Math in Physics

Textbook Scavenger Hunt

- You are going to be shown a series of questions
- First person to raise their hand and answer correctly gets a shot at a Homework Pass

Math in Physics

Textbook Scavenger Hunt

- **What is the resting mass of an electron in kg?**

Math in Physics

Textbook Scavenger Hunt

- What is the resting mass of an electron in kg?
- **9.11×10^{-31} kg (inside front cover)**

Math in Physics

Textbook Scavenger Hunt

$$\frac{d}{dx} x^n = ?$$

New Book Only

Math in Physics

Textbook Scavenger Hunt

$$\frac{d}{dx} x^n = ?$$

$$\frac{d}{dx} x^n = nx^{n-1}$$

Inside back cover

Math in Physics

Textbook Scavenger Hunt

- **What is the value of one henry in terms of its base units?**

Math in Physics

Textbook Scavenger Hunt

- What is the value of one henry in terms of its base units?
- $1\text{kg}\cdot\text{m}^2/(\text{s}^2\cdot\text{A}^2)$ (inside front cover, pg 2)

Math in Physics

Textbook Scavenger Hunt

- What is the value of one henry in terms of its base units?
- $1\text{kg}\cdot\text{m}^2/(\text{s}^2\cdot\text{A}^2)$ (inside front cover, pg 2)
- What does the variable "A" stand for in this derived unit?

Math in Physics

Textbook Scavenger Hunt

- What is the value of one henry in terms of its base units?
- $1\text{kg}\cdot\text{m}^2/(\text{s}^2\cdot\text{A}^2)$ (inside front cover, pg 2)
- What does the variable "A" stand for in this derived unit?
- Ampere (electric current), (footnote)

Math in Physics

Textbook Scavenger Hunt

- **What is the outer shell electron configuration for Ra?**

Math in Physics

Textbook Scavenger Hunt

- What is the outer shell electron configuration for Ra?
- $7s^2$ (inside back cover)

Math in Physics

Textbook Scavenger Hunt

- **What is the answer to problem #15 in chapter 4?**

Math in Physics

Textbook Scavenger Hunt

- What is the answer to problem #15 in chapter 4?
 - New Book - 2.5 m/s^2 , down (page A-28)
 - Old Book – $a \geq 2.2 \text{ m/s}^2$

Math in Physics

Textbook Scavenger Hunt

- **What is the formula for the surface area of a right circular cone?**

Math in Physics

Textbook Scavenger Hunt

- What is the formula for the surface area of a right circular cone?

$$\pi r^2 + \pi r \sqrt{r^2 + h^2}$$

- (New Book - inside back cover)
- (Old Book – Pg. 1044)

Math in Physics

Textbook Scavenger Hunt

- **Without using a calculator, find the tangent of 19° .**

Math in Physics

Textbook Scavenger Hunt

- Without using a calculator, find the tangent of 19° .
- **0.344**
 - New book (pg. A-9)
 - Old book (inside back cover)

Math in Physics

Textbook Scavenger Hunt

- **What is the half-life of Einsteinium?**

Math in Physics

Textbook Scavenger Hunt

- **What is the half-life of Einsteinium?**
 - **New Book - 471.7 days (pg. A-15)**
 - **Old Book – 275.7 days (pg. 1067)**
 - **Why the difference?**

Math in Physics

Textbook Scavenger Hunt

- **What is the half-life of Einsteinium?**
 - **New Book - 471.7 days (pg. A-15)**
 - **Old Book – 275.7 days (pg. 1067)**
 - **Why the difference?**
 - **New Book – Einsteinium 252**
 - **Old Book – Einsteinium 254**

Math in Physics

Textbook Scavenger Hunt

- **What is the Law of Sines?**

Math in Physics

Textbook Scavenger Hunt

- What is the Law of Sines?

$$\frac{\sin \alpha}{a} = \frac{\sin \beta}{b} = \frac{\sin \gamma}{c}$$

- Old Book - (page 1045)
- New Book – (page A-8)

Math in Physics

Textbook Scavenger Hunt

- **25-point bonus question: Determine the thickness of one page of your book in micrometers using a ruler.**

Math in Physics

Textbook Scavenger Hunt

- **25-point bonus question: Determine the thickness of one page of your book in micrometers.**

$$\begin{aligned} & \frac{33\text{mm}}{(946 + 58 + 26)\text{pgs} / 2} = 6.4 \times 10^{-2}\text{mm} \\ & = 6.4 \times 10^{-5}\text{m} \\ & = 64\mu\text{m} \end{aligned}$$

Review: Can You

- Quickly estimate the answer to a complicated problem to within a factor of 10?
- Can you use dimensional analysis to convert units and to check solutions?
- Find important facts in your textbook?
